SKYNET
BROADBAND SOLUTIONS

SkyNet is committed to the relentless pursuit of excellence.

Who We are.

SkyNet is a broadband solutions company with over 12 years wireless experience and a specialty in the areas of wireless WAN and IP solutions. Our objective is to use our experience and expertise to increase your business's productivity while reducing your monthly expenditures. Our strength lies in partnering closely with our clients, listening and understanding their business, and designing real world solutions that are customized to fit their needs while implementing their projects on time and within budget.

What We Do.

Your success is our goal – a customized SkyNet solution removes obstacles to effective communication, and accomplishes this at an affordable price.

SkyNet engineers solutions that are reliable, stable, and secure. Our backhaul solutions utilize OFDM technology, dynamic rotating encryption, and an industry leading 99.999% availability.

SkyNet Broadband Solutions Inc. are the experts in wireless and IP solutions including:

- Wireless backhaul and LAN extensions
- WLAN
- VoIP
- IP Surveillance

SkyNet solutions make financial sense and make a strong business case. Our solutions offer higher performance, a lower Total Cost of Ownership, and are easier and less costly to implement when compared to traditional wired networks. This translates to a quicker Return on Investment and bottom line savings to our clients.

Our solutions are designed to fit all applications to meet the most rigid standards of availability, stability, and security, making them a viable alternative for data, voice, and video networks.

SkyNet solutions are tailored to meet an array of industry standards including Educational, Healthcare, Government and Municipality, SMB, Enterprise, Financial, Manufacturing, Telephony, Service Provider and Last Mile.
